

**Bass Drum Spur
Drilling Template for
DF # BS07**

**LEFT SIDE
looking at batter head**

Note: There is no left or right spur in this set. Spurs fit correctly on either left or right side of bass drum shell.

1. Decide where you want to mount the bass drum spurs. Have your lug holes marked or drilled first.

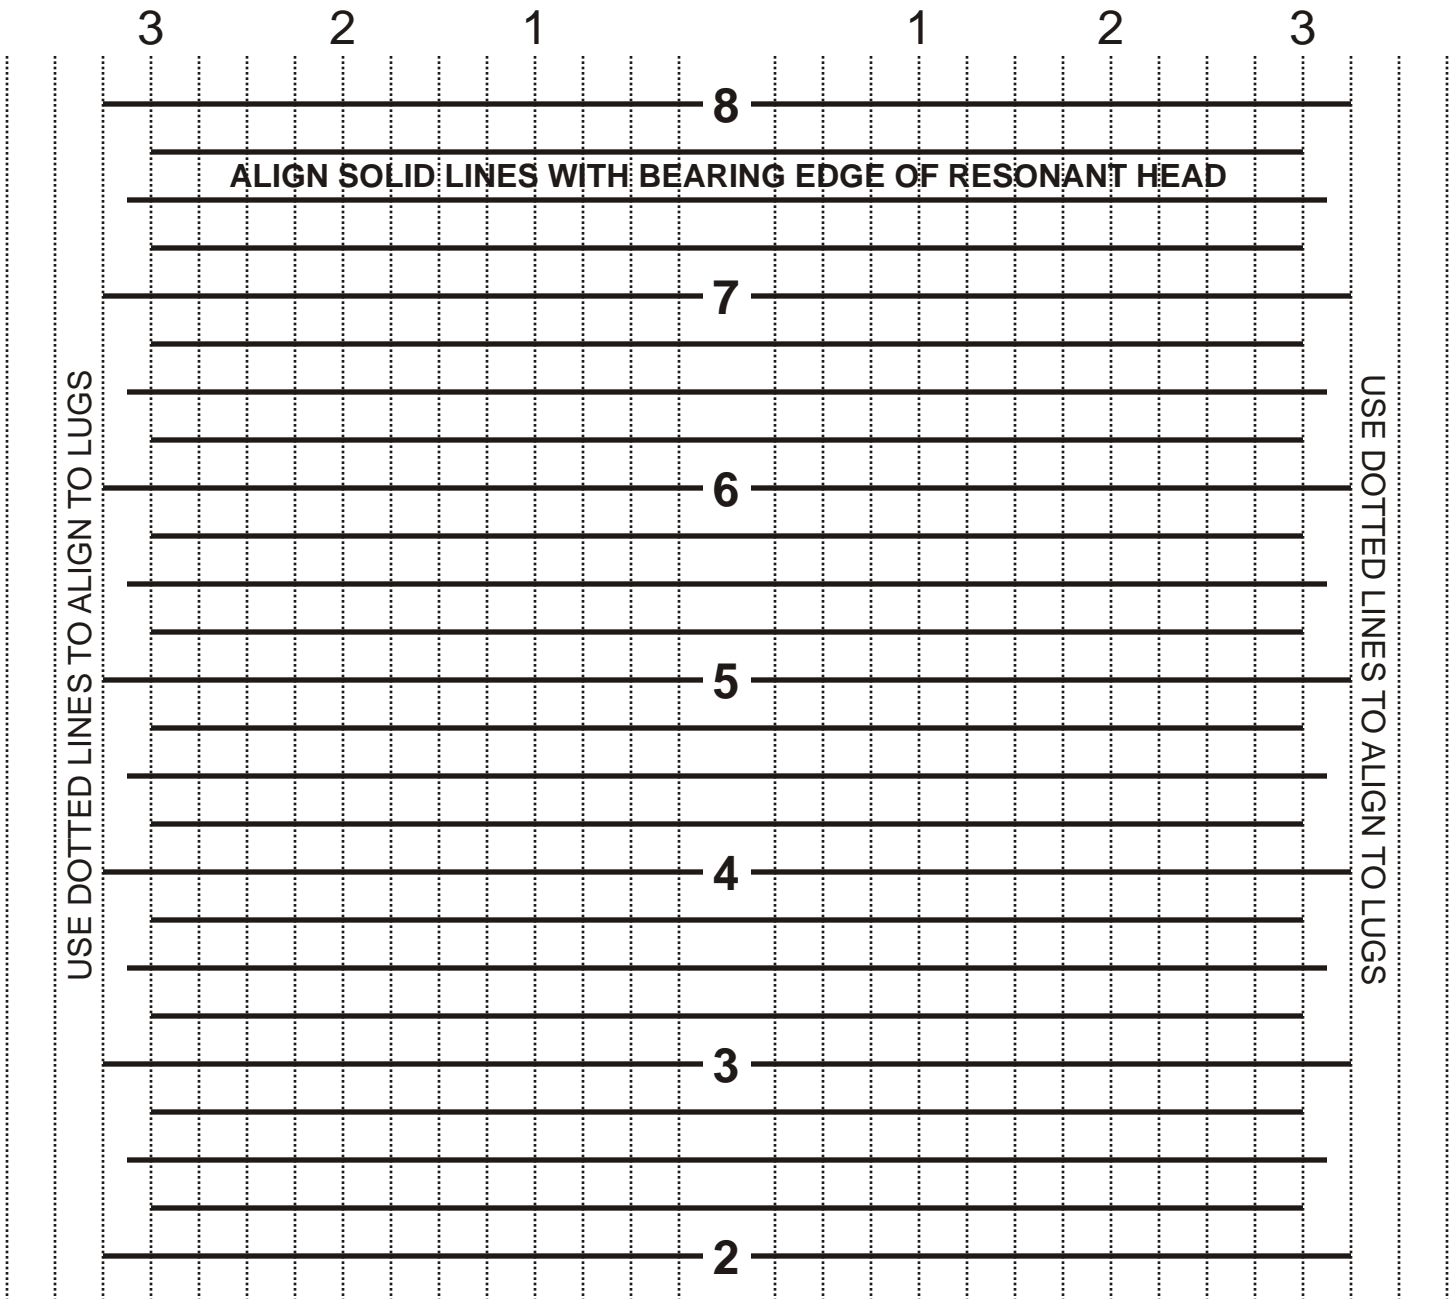

2. Use the solid lines to align with the bearing edge.

3. Use the dotted lines to place spur in relation to the lug holes.

4. Tape template to shell using painter's blue tape. Mark and drill with 5/16" drill.

If the template seems too large or small, make sure that Adobe Reader is printing at 100%
